      Medical Records & Reports: Access and download prescriptions, pathology, and radiology reports**.**

      Parent Profile

      Manage parent profile and privacy settings and access notifications, FAQ's,help &support.

d)   Value Propositions:
Combines child health tracking, vaccination records, doctor consultations, nutrition, and events in one app. And help parents to track growth of child,manage vaccinations,and can track the health events conducted and can easily download prescriptions.

Task 2

Understanding of Fennex:

1. Fennex is a company that builds smart digital tools which helps the people to work in dangerous place like oil,gas etc.
2. They help to track safety,manage records and warn about risks before accidents happen.
3. Some of the Fennex Products are BBSS^{TM,},Risk Management Tool,Audit and Inspections,AI Predictive Safety ,EHS Suite,WindSafe.

What projects does 366pi works:

- 366pi helps Fennex to build safety tools likeBBSS(Behaviour based Safety System) and WindSafe (for offshore wind industry).
- 366pi use Microsoft tools like SharePoint for storing and sharing documents, Azure SQL for handling data, and Power BI for creating reports and dashboards.
- 366pi also create smart forms and safety checklists, and ensure that data is accessible only to the right people.
- 366pi work with Fennex on safety projects for big companies like ExxonMobil, Transocean, and Noble. We help set up their tools at offshore sites so everything works well and is safe.
- Fennex's smart tools have reduced accidents by about 43%. With 366Pi's help, we build a strong safety culture where teams notice risks early and act on them.

TASK 3

Basics of SharePoint:

SharePoint is a Microsoft tool which acts as a central workplace which helps companies to keep, share, and manage documents and processes in one central place. It makes teamwork easier and keeps everything well organized and collaborate easily.

Key Uses of SharePoint:

1. Document Libraries: it is a central place were we can store,organize and share files keeps track of versions so you can see who has edited and make sure documents are always updated and easy to find.
2. Sites: Sites are like mini-websites created for a team,department, project inside a company. It has 2 site :
    Team Site : it is used for group working on the same project so that they can share documents, task tasks and post updates.
    Communication Site: it is used for sharing news,announcements across the whole company.
3. Workflows: Reduces manual work and saves time by automates tasks like approvals, reviews or sending notification and also ensures the processes are followed correctly an consistently.

3 SharePoint UseCase:

-   Employee Onbording: New hires can access joining forms,policies,training materials in one place.it saves time and makes the onboarding smooth.
-   ProjectManagement:Teams can store project documents,assign tasks,track progress and share updates here everyone can knows what's happening without lots of emails.
-   Document Approval Process: sharepoint can be used to automates approvals for leave,official documents instead of sending emails.

Task 4

Live cases of products

1. FloCard: it replaces paper and business cards where you can share a digital card through QR code and it is used by professionals and businesses to share network in a sustainable. The core value is its smart, eco-friendly and helps in easy network sharing.
2. Tree Planters: It helps to track the planted tree by tagging trees,share location and also monitor the growth and it is used by tree planters,NGO's,and farmers the core value here is its we can track each plant for efficient plant management.
3. KidCare:Parents feel difficult to manage child health records and appointments and it is used by parents,pediatricians the core value is we can book doctors appointment online,update growth status of the child, vaccination tracking also provide meal preference and track health events conducted .
